

WE KEEP YOUR FLEET FLYING

We are a worldwide brokered network of repair stations with aviation expertise – focusing on UAS

You Deserve Better Customer Service

Commercial UAS operators partner with Robotic Skies for one reason: to keep their high-performance commercial aircraft in the air.

Shipping your unit back to a remote location to be serviced is neither efficient nor economical and can destroy the business case behind investing in your fleet.

Robotic Skies provides local maintenance and repair services to the commercial UAS industry worldwide – via a network of more than 170 certified Service Centers across 40 countries.

As a commercial UAS operator, you deserve world-class customer support provided by highly trained aviation technicians – not as an afterthought to sales.

Robotic Skies is the only company providing a turnkey solution to serve the commercial UAS industry built off a solid foundation of decades of manned aviation experience.

Stop Worrying About Maintenance

The customer support model in today's commercial UAS industry is broken. In no other industry is it acceptable to spend tens if not hundreds of thousands of dollars on equipment – and yet have support programs that are slow, unreliable, and costly.

Partnering with Robotic Skies can alleviate all of these challenges and make your program even more successful by keeping your UAS flying.

Benefits of Partnering with Robotic Skies

- OEM Certified Technicians
- Regulatory Preparedness
- Liability Mitigation

Robotic Skies is Your Global Partner Providing Local Solutions

REAP THE BENEFITS OF OUR WORLDWIDE SERVICE CENTER NETWORK

OEM Certified Technicians

You have invested significant capital into your fleet, and you want to make sure the support you receive is befitting this investment. The only way to do this is to ensure your maintenance is performed by professionals focused on servicing your UAS, not on selling you a new unit.

Every Robotic Skies technician who works on your UAS is a trained aviation professional, already certified to provide maintenance to the manned aviation industry. Our techs will also be authorized by the manufacturer to maintain and repair your aircraft.

The processes and procedures employed by Robotic Skies are founded in decades of experience in the manned aviation industry, and provide the consistency and accountability that nobody else can offer in the commercial UAS industry.

Regulatory Preparedness

As mission complexity increases, there will inevitably be higher levels of regulation mandated by the global aviation authorities. Regulations will likely develop along the same lines as manned aviation and require certified maintenance.

Robotic Skies is prepared for this eventuality as all of our more than 170 network Service Centers are already certified repair stations — currently servicing the manned aviation industry.

It is a small step for our Service Centers to be ready to provide certified maintenance to the UAS industry. Nobody else can offer you the assurance of being ready for any regulatory outcome that Robotic Skies can.

Liability Mitigation

By their nature, unmanned operations are risky. When an incident does occur, you want to have a maintenance partner you can point to with certainty.

Robotic Skies is that partner, as we help fleet operators mitigate liability exposure by providing maintenance services consistent with the best practices in manned aviation.

Our processes ensure each job is traceable and all record keeping is completed to both regulatory and customer specifications. When the time comes that you are asked for your maintenance records, you will have confidence that everything was properly executed and documented.
