Local UAS Maintenance for Your Customers All Over the World

Turnkey Maintenance & Repair Solutions

Stay focused on developing, building, and selling new products while Robotic Skies delivers professional maintenance and repair services that ensure the ongoing reliability, safety, and long service life of your UAS.

The Robotic Skies team guides you through the process of establishing a maintenance program tailored to your requirements. Our support includes:

- Scheduled maintenance & repairs
- Parts logistics
- Field upgrades
- Airframe assembly & completion
- Record keeping
- Continued airworthiness

Minimize Customer Downtime

When a system is grounded, your customers are missing out on valuable business opportunities. Shipping systems back and forth to remote facilities for repairs can compound this problem with additional expense and indefinite return to service schedules. Local support means your customers can stay more productive, getting the help they need faster with less downtime.

Quality & Safety Assured

Every Robotic Skies Service Center carries maintenance certifications from its local civil aviation authority and currently serves the manned aircraft industry.

Our quality-controlled processes ensure each job is traceable, and all recordkeeping reflects both regulatory and customer specifications.

Out of the Box Regulatory Support

As commercial drone mission profiles grow more complex, regulations will more tightly govern these operations. The Robotic Skies team comes equipped with decades of manned aviation regulatory experience and is actively involved in shaping the safe integration of UAS into the national airspace.

As requirements emerge, we can help you design and deploy programs to comply with any new regulations.

Your Trusted Partner

With the expertise Robotic Skies offers, you can confidently build a safety-first product support ecosystem and provide exceptional post-purchase support to your customers.
